Corrupted scenario?

Posted by Electricsheep82 - 19 Aug 2025 11:54

So I've been trying for a few days now to install the Elric of Melnibone scenario from Heeter's site (www.heeter.net/warlords/scenarios/deluxe...pc_and_mac/elric.zip). It seems like it works in the Librarian, but then it never shows up in the list of scenarios. When I look at what files actually are created afterwards, the SCN file appears in the scenarios folder, and a folder appears in the army folder, but it is empty. No other files are created, even though the Librarian says the scenario also includes cities and shields. Even if I unselect to extract the armies, the army folder gets created and seems to stop there. Does anyone know about this? Am I doing something wrong? Can anyone else install it? Does anyone have a working copy of the scenario?
