W3 DLR Font Problem

Posted by TheSAguy - 07 Sep 2011 00:33

Hi,

I've created a virtual box and installed W3 DLR and it runs fine. I installed a XP box but set the compatibility of the executable to Win 95.

So the game runs and I can play, but the font on the side of the screen that informs you who is doing what does not re-fresh. So after a turn or two you can't read anything. The same happens when setting up a custom army. When you scroll down to select your units it all gets jumbled up.

Anyone know how to fix this?

Thanks.

I sent you a link to my pre-built Windows 2000 & DLR VM.

Ian
