game doesn't start after install - windows 7

Posted by dragonlawl - 27 Dec 2011 02:24

Hey everyone, I installed DLR on Windows 7 64x and used the /wincursor trick, but even then the game still crashes right after open it, aka it doesn't go further than the select resolution screen (already tried compatibility stuff too). Please help!

Try to run Darklords as administrator.

Don't install it under 'Program Files' because Windows 7 does not allow programs to write to that directory and DLR needs to write to files in it's folder.

---

tried those still not working.

Although I did install it on an older computer (which was 32 bit) and moved it over. It was only installed in program files on the 'old' computer (but not the new one, does this matter?).

if not, any other suggestions?

Try to run DLR version from Molotov's website lastcitadel.ru.

I'm glad to say that the version from lastcitadel.ru works, but it's having some colour trouble. But that doesn't matter, as after much struggle I got VirtualBox Windows 98 working. So I'm gonna play on that instead.

Thanks a lot for the help!
