Installing Warlords IV from DVD

Posted by Grimlock - 30 Nov 2013 06:06

I decided I wanted to fire up one of my favorite old video game series and still have the Warlords IV DVD (not sure where all my other game discs went over the years). When I try to install the game, I click the install button and see, "Cannot start the Warlords IV Installer".

I've searched around and do not see a thread on this. Any advice on getting this, or any of the other Warlords games to work? I don't mind even re-purchasing the games if they will work flawlessly on new hardware.

Thanks!

Grimlock,

Can I assume you are trying to install into a 64 bit version of Win 7 or Vista?

It may be that your CD is bad. But it may also be that the installer program isn't compatible. I know DLR for example has a 16 bit installer for a 32 bit game and so it can't be installed on any 64 bit system due to the installer not being able to run. It's very possible that War IV has this same issue.

You could try installing on another older XP machine just to confirm whether it's the installer or the CD.

---

my WL4 cd installed with no problems on Vista 64 bit home premium SP2.

also installed the 1.05 and 1.05B patches, no problems.
