Need instructions to run W2 Deluxe on XP

Posted by wookstar - 08 Feb 2014 04:59

I have downloaded W2 Deluxe from this site & require step by step instructions to get this running on my XP machine.

I have looked at many forums online but each one differs.

P.S. Not the greatest with computers.

Thank you for any assistance.

Wookstar,

As far as I know the only way to play War2 under XP is using Dosbox (or another virtual machine). I personally use Dosbox when I play War2.

So the only help I can give you is to:

1) Install War2 on your XP machine (have you done this?)

2) Download Dosbox (it's free) and learn how to use it (there are plenty of links dedicated to that). It's fairly simple to use actually so it shouldn't be a problem. I (and others here) can help with this if you are struggling with that.

I have downloaded the game & have DosBox 0.74 loaded. I believe that I am having problems with Dosbox to get it running. Do I have to change anything in the W2 Deluxe config file?

Thank you.

_____

Wookstar,

What kind of problems are you having? I need more info to know whether you have a Dosbox issue or something else.

I realized you said you grabbed War2 Deluxe. That came on a CD and may require a CD to be emulated in order to play. I just use the plain War2 + Scenario builder which all came on disk and didn't require any CD. Not saying that's the problem but it might be. Need to know exactly what issues you are seeing.
