Can't make game play without crashing

Posted by Bacillus - 07 May 2014 02:23

I downloaded 1.02 from this site and unzipped it OK. When I run the game though, it warns me I have insufficient disk space (I have almost 1TB of free disk space). The game will play for a short time but then freezes and I have to reboot the computer. I have no idea how to use virtual machine.

Bacillus,

Don't worry about the disk space warning. That's because the game is so old it thinks a large amount of space is a small amount due to wrapping around a 16 bit number.

Your game freeze sounds like you have the wincursor problem. What O/S are you running under?

1) Make a shortcut to the game (assuming you don't already have a shortcut to the game).

2) Right click on the shortcut and go to the target window. It will say something like C:DLRWarlords.exe

3) Add -wincursor after it (space between -wincursor and the game). It should then look like C:DLRWarlords.exe -wincursor
