I just played!

Posted by Hermskii - 27 Dec 2014 11:57

_____

After goofing off with Warlords 2 for the last several hours trying to get it to run on Windows 7, 64 bit with either DOSBOX or Windows Virtual PC in Windows Virtual XP Mode I finally got it to work!

For the record it was in DOSBOX that I got it to work but it was full screen with voice and music! Everything was virtually perfect except that there is a little hiccup or stall at several occasions where the PC has to think like when it is the other player's turn or when you tell your army to move. There is this little delay that is bothersome to the person who knows how to play and likes to play fast.

So I just wanted to drop a line to say I got it to work! I even have a little DOSBOX shortcut that launches directly into the full screen mode of the intro screen of the game. Greetings Warlord! "Let the War begin!"

_____

Try speeding up the DOSBox emulated CPU. By default it's pretty slow. F11/F12 (or CTRL F11/F12 I forget) speeds up / slows down the CPU. I normally speed it up to 16000 to speed up CPU turns. If you go too fast the sounds/voice messes up and then you back it down just a bit.
