Warlords 3 DLR: Error

Posted by Dandolme - 08 Dec 2012 05:26

Hi everyone,

I'm trying to play warlords 3 DLR with my friends over hamachi, but I keep getting this Error message Error!!!!
(See link) I've disabled windows firewall and my antivirus. It's working fine for my friends,they can join eachother games without any problems but they cant join my game! they find it but they cant join.

If u have any idea how to fix this problem, then please reply here!

Best regards Alexander

Alexander,

You say they can't join yours (when you host). But can you join their games (they host)?

Here is something else to try. Start Hamachi. Then start DLR and host a game. Then start DLR again (you can run DLR multiple times) and try to join the game you are hosting. If everything is setup correctly you should be able to join your own game. If you can't the problem is 99% of the time in your router settings (usually it's a setting blocking incoming connections).
