I tested Darklords Rising. I crashed several times, but after playing with settings in dxcfg.exe it stopped crashing.

Basically this release uses GOG.com DirectX wrapper (similar to DxWnd). It means that "-wincur" is no longer needed (like with DxWnd).

And it has soundtrack! It plays natively without the original CD.

M0d3M,

Thanks for posting and taking the time to try out DLR. It's awesome that it works AND has the original sound track.

Presumably it's using the 1.02 patch?

Yes. It's 1.02.

I hope we'll see many new faces here soon 🍌

This is awesome, I haven't really played this in years.

It's been running smoothly on win7 so far.

Bought it after long wavering (mainly concerning if I *really* need *another* W3DLR distributive at all).
Premonitions were true, I had
need
in another W3DLR distributive

no

GOG version doesn't work on my old-gaming XP desktop (yes, I know, it shouldn't because GOG doesn't support XP anymore blah-blah) but I still wonder what they managed to do with the game from 1998 (that runs perfectly on XP) that it now doesn't start at all. I think it's because of stupid 'GOG wrapper'(tm) they shoveled into distributive to make it work on Win10.

GOG releases of old games (already rare nowadays)become worse and worse and worse every time. Some of them didn't even run on Win7 when I tested them. What will follow when January 2020 came? 🙄

That's why I have kept the old GOG Install files when the XP was supported for my favorite games, because as years go by, GOG updates them for the new windows version and sometimes you get problems even When you try to make them work in the newer Windows, eg WIN 10.

Even W III DLR, doesn't play exactly on WIN 10 like it does on my WIN XP laptop using the original CD. One thing I noticed, you don't see some of the special effects like for a example when the elf archers shoot their arrows on the enemy the actual arrows hitting the enemy effect in the battle screen does not appear on the GOG WIN 10 version.
