

Billy's back

Posted by Billy the Mountain - 25 Jun 2011 09:40

I'm retired and still playing DLR. Good to see old friends here. I'm just setting up my Alienware M11x laptop and will dig out the old DLR CDs and install the game and patches one more time. I'll be available soon for PBEM games.

I'm stuck. I'm running Sys 7 Pro 64 bit and the Microsoft XP Virtual Machine I downloaded seems to also be 64 bit. I downloaded the Virtual box but I do not have any operating system disks older than Vista. I might dig that one out and try it.

I sent you the link to my VM a couple of weeks ago and the private message has some basic instructions in it.

Just download the VM and you are about 10 clicks away from running DLR in Virtual Box!

When I get a moment I must put some instructions on this website ...

Batz
